TOTAL FIXES vs baseline

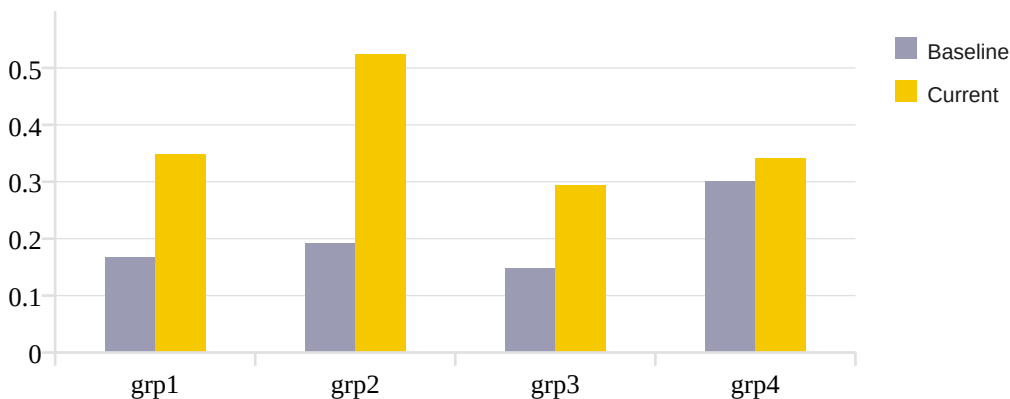

Periods compared

Window	Dates (local)	Duration	System
Baseline	Sun 31 May 09:48 → Mon 1 Jun 09:48	24 h	Pre-proactive round-robin selection
Current	Mon 8 Jun 09:48 → Tue 9 Jun 09:48	24 h	Deployed stack; per-device plan interval enforced for battery

Identical 24-hour clock window, same Sunday→Monday alignment, same fleet (~17 active tags per group), full data coverage. Metric: per-tag valid fixes per minute (≥3 hyperbolas).

Per-group result

Group	Baseline fixes	Baseline /min	Current fixes	Current /min	Change
grp1	4,087	0.167	8,547	0.349	▲ +109%
grp2	4,720	0.193	12,816	0.524	▲ +172%
grp3	3,638	0.149	6,774	0.294	▲ +97%
grp4	7,370	0.301	8,360	0.342	▲ +14%
TOTAL	19,815		36,497		▲ +84%

Per-tag fixes per minute, by group.

Before (May)

What drove it

- The current window runs the battery-optimised schedule (plan interval enforced since 8 Jun), so the gain reflects localization efficiency — more valid fixes per transmission — not a higher transmission rate.

After
